

Commitment to Net Zero

# Commitment to Net Zero

We have globally pledged to reach a state of net zero greenhouse gas (GHG) emissions and have established science-based targets in the near term. We are actively reducing carbon emissions from our operations and ensuring that our university's growth is not linked to an increase in emissions. Additionally, our international strategy includes a commitment to enhancing transparency and contributing to the development of reliable ESG (Environmental, Social, and Governance) reporting frameworks and standards. Given our widespread presence, we recognize our significant potential to drive the transition towards a net zero economy.

As a leading institution dedicated to sustainability and environmental stewardship, we recognize the imperative to take bold action in addressing climate change. Our commitment to reaching net-zero emissions is a testament to our dedication to creating a more sustainable future for generations to come.

## **Our Commitment**

At TSUULL, we understand the urgency of the climate crisis and the critical role that institutions like ours play in driving positive change. By committing to achieve net-zero emissions by 2050, we are taking proactive steps to reduce our carbon footprint and mitigate the impacts of climate change. This commitment encompasses all aspects of our university operations, from energy use and transportation to waste management and procurement.

## **Key initiatives**

Our journey towards net-zero emissions will be guided by a series of key initiatives, including:

- Transitioning to renewable energy sources such as solar and wind power;
- Implementing energy efficiency measures to reduce our energy consumption;
- Promoting sustainable transportation options for students, faculty, and staff;
- Minimizing waste generation and implementing recycling and composting programs;
- Integrating sustainability principles into our procurement processes and supply chain management;

## **Transparency and Accountability**

We are committed to transparency and accountability in our efforts to achieve net-zero emissions. We will regularly track and report on our progress towards this goal, sharing updates and milestones with our university community and the wider public. Through open communication and engagement, we aim to foster a culture of accountability and collaboration that drives continuous improvement in our sustainability practices.

### **Get involved with us!**

Achieving net-zero emissions by 2050 requires collective action and collaboration. We invite members of our university community, including students, faculty, staff, alumni, and community partners, to join us on this journey towards a more sustainable future. Together, we can make a meaningful impact and lead by example in addressing the climate crisis.

At TSUULL, we are committed to being a leader in sustainability and environmental stewardship. Our pledge to achieve net-zero emissions by 2050 reflects our dedication to creating a healthier, more resilient planet for current and future generations.
